TL;DR

My research explores how computational tools shape the ways people create and experience sound. Working at the intersection of audio, machine learning, and human-centered design, I develop novel audio models and interactive systems grounded in real creative practice while studying their practical and broader cultural impacts. I aim to design audio systems that are expressive, inclusive, and socially responsible.

Research interests: creative audio ML, music information retrieval, HCI, sonic interfaces, practitioner-centered design, ethical ML/AI
